TYROSINE + PHOSPHATE.

C. -! - SUBCELLULAR LOCATION: NUCLEAR AND CYTOPLASMIC.

-! - SUBCELLULAR LOCATION: THO FORMS OF THE PROTEIN, FIPL AND FLP1B, MAX BE PRODUCED STATES ENPRESSED OF FIPE SAME GENE. THE SEQUENCE SHOWN HERE IS THAT OF FIPLA.

-! - TISSUE SPECIFICITY: HIGHEST EXPRESSED IN BONE MARROW. ALSO EXPRESSED IN KIDNEY, LUNG, OVARY, SPLEEN, THYMUS AND LYMPH NODE.

-! - DEVELOPMENTAL STAGE: EXPRESSED IN THE EMBRYO FROM DAY 15.5.

-! - SIMILARITY: BELONGS TO THE NON-RECEPTOR CLASS OF THE PROTEIN-

TYROSINE PHOSPHATASE FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 //OCLE—"Vector: lambda pSB; Site_1: BamHI; Site_2: ECORI; First strand cDNA was primed with an anchored XhoI-oligo(dT) primer [5'GGAGGCTCGAGCGGCCCCAGGGGGG(T)VN 3'; V-A,C,G: N-A,C,G,T] and then dG tailed. Second strand was primed with a BamHI-dC primer [5'AGAGCTCGGATCGCGCCCCAATAATAATAATA(C) 3']. Double-stranded cDNA was then digested with BamHI and XhoI and directionally cloned into the BamHI and SalI sites of lambda pSB vector. Library went through one round of normalization. Library was constructed by Wei Yu at RIKEN of Japan (Carninci P, Westover A, Nishiyama Y, Ohsumi T, Itoh M, Nagaoka S, Sasakin, Okazaki Y, Muramatsu M,

The present cDNA sequence is that of the Lymphoid Protein Tyrosine Phosphatase gene, Lyp2 that encodes a cytoplasmic tyrosine phosphatase protein with a single catalytic domain. The Lyp gene has been localised to human chromosome lpl3. It is expressed significantly in fetal liver and in resting lymphoid cells. The Lyp2 gene sequence arises by a literative splicing of the Lyp1 mRNA and the coding sequence reads into the intronic sequence of Lyp1 till a termination codon is encountered. Lyp gene products are important for regulation of T cell antigen and cytokine receptor signalling and for early and late stages of T cell ciferentiation. Lyp2 has immunosuppressive activity. This sequence is used to treat lymphoma, to reduce or prevent T cell activation or proliferation and to control thymcoyte differentiation. Fragments of this gene are used, as probes or primers, to identify allelic variations can for diagnosis of diseases associated with reduced Lyp activity. Transgenic animals in which a Lyp gene has been inactivated or replaced the activity of the control cont

The present cDNA sequence is that of the Lymphoid Protein Tyrosine Phosphatase gene, Lyp 1 that encodes a cytoplasmic tyrosine phosphatase protein with a single catalytic domain. The Lyp gene has been localised to human chromosome lpl3: It is expressed in the lymphoid cells, particularly in thymcoytes, mature B and T cells. It is involved in lymphocyte growth and development. Lyp gene products are important for regulation of T cell antigen and cytokine receptor signalling and early and late stages of T cell adifferentiation. Lyp lass immunosuppressive activity. This sequence is used to treat lymphoma, to reduce or prevent T cell activation or proliferation and to control thymocyte differentiation. Fragments of this gene are used, as probes or primers, to identify allelic variations and for diagnosis of diseases associated with reduced Lyp activity. Transgenic animals in which a Lyp gene has the lasting and inactivated or replaced by a heterologous Lyp gene are used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  180

The present invention describes isolated, enriched or purified nucleic acids encoding PTP04, SAD, PTP05, PTP10, ALP and ALK-7 proteins. The present sequence encodes human PTP04. The above proteins. The present sequence encodes human PTP04. The above proteins. The present sequence encodes human PTP04. The above proteins and antagonists of substances that modulate their activity (i.e. agonists and antagonists. Including MBP) in vivo or in vitro. These substances are used to treat or prevent diseases associated with abnormal signal transduction or pathways that involve the proteins, particularly cancer (e.g. leukaemia and Imphoma), while modulaters of ALK-7 (which is a type I receptor serine/threonine kinase) are used to promote neuronal survival, are serine/threonine kinase) are used to promote neuronal survival, particularly for treating Alzheimer's, Parkinson's or Huntington's diseases. Nucleic acid fragments of the polynucleotides encoding the proteins can be used as probes to identify and clone related sequences; to detect protein-encoded RNN, to generate transgenic animals and in generate therapy (optionally after mutation). Ab are used to determine the
                                                                                                                                                                                                                                                               New nucleic acid encoding specific protein tyrosine phosphatases useful for identifying specific modulators for treatment and prevention of cancer and neurodegenerative disease
                                                                                                                                               'n

Sequences AAF21614 - AAF22031 represent DNA sequences encoding human proteins AAB58711 - AAB59128. The DNA and protein sequences are proteins AAB58711 - AAB59128. The DNA and protein sequences are sesociated with breast and ovarian cancer. Included in the invention are sequences AAF22032 - AAF22040 and AAB59129 which are used in the invention are associated DNA. protein, agonist contropic, neuroprotective, antiviral; antiallergic; hepatotropic, or antagonist sequences exhibit cytoStatic; immunosuppressive; antidiabetic; antifinamatory; antiolicer; vulnerary; anticontusant; antibacterial; antifungal; antiparasitic and cardiant activity. The polynuclectide and protein sequences are used in the diagnosis of cancer, particularly breast and ovarian cancer. The nucleic acid sequences, proteins, agonists and agonists may also be used in the diagnosis, proteins, agonists and agonists may also be used in the diagnosis, allergies, autoimmune thempolytic anaemia, autoimmune thyroidilis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New human breast and ovarian cancer associated gene sequences and the polypeptides encoded by these genes, useful in the prevention, treatment and diagnosis of cancer, immune disorders, cardiovascular disorders and neurological diseases

The present invention describes a method for examining ischaemic conditions, comprising measuring the expression levels of particular genes (I) in a test sample or determining the expression profile of a genes (I) in a test sample comprising genes selected from profile of a gene group in the sample comprising genes selected from (I). The method is useful for examining the ischaemia condition (e.g. compression ischaemia) or particular genes (AB199202 to AB199912, encoding expression levels of particular genes (AB19202 to AB199912, encoding the protein sequences in ABB57020 to ABB57374) or by determining the expression profile of a gene group comprising these genes are used as an indicator when screening for ischaemic condition-improving represent PCR primers for ischaemic diseases. AB199913 and AB199914

represent PCR primers for a mouse ischaemic condition related sequence, which are used in the exemplification of the present invention.
                                                      Examining the ischemic condition (e.g. occlusive ischemia) by measuring expression levels of particular genes defined in the specification or by determining the expression profile of a gene group comprising these
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          380
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            440
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     200
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    282
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                320

The present sequence encodes a novel murine non-receptor protein tyrosine phosphatase of hematopoietic stem cells (PTP HSC). This protein is predominantly expressed in early hematopoietic stem cells (HSCs) or progenitor cells, and lacks expression in adult tissues. The protein has a N-terminal tyrosine phosphatase domain, followed by a region rich in serine, threonine and proline and a C-terminal region of about 15-25 amino acids which is rich in basic amino acid residues. The protein is capable of tyrosine dephosphorylation in hematopoietic progenitor cells, and functional derivatives of such native tyrosine phosphatases. The phosphatase domain of the PTP HSC or a PTP HSC expressing HSC or progenitor cell can be used in an assay for the identification of PTP HSC
                                                                                                                                                                                                                                                                                                                                                                                                                                 Non-receptor protein tyrosine phosphatase; hematopoietic stem cell; PTP HSC, progenitor cell; tyrosine phosphatase domain; PTP HSC agonist; tyrosine dephosphorylation; tyrosine phosphatase; PTP HSC antagonist; stem cell differentiation; a

antagonists or agonists. The antagonist can be used to induce the differentiation of stem cells, such as undifferentiated malignant hematopoietic cells, e.g. leukaemia cells, which may facilitate their treatment. The PTP HSC or an agonist antibody against the PTP HSC can be used for the expansion of undifferentiated stem cells in cell culture (this allows expansion of HSC prior to autologous or heterologous bone marrow transplantation), while the agonist antibody along with a hematopoietic growth factor can be used for the expansion of undifferentiated stem cells in vivo.
                                                                                                                                                                                                                                                                                                                                                                                                                                   439

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This cDNA clone codes for a novel rat protein tyrosine phosphatase, designated PPP20 (see AAW49906), that regulates growth factor stimulation of cellular differentiation. The clone was isolated from a rat phaeochromocytome PC12 cDNA library by PCR amplification using primers based on consensus sequences (see AAW49915-16) of known C PTPs. The invention relates to novel proteins (see AAW49906-14) involved in cellular signal transduction and to the nucleic acids (see AAV17097-99) coding for them, and provides vectors, host cells, purified recombinant proteins, methods for identifying compounds that bind the novel proteins or abrogate their interactions with natural binding partners, as well as methods for the diagnosis and treatment of diseases associated with the novel proteins. For STP20, activators may act as anti-cancer therapeutics that stimulate cell differentiation rather than proliferation, while inhibitors may be useful for treating neural injuries by delaying the differentiation of transplanted neuronal stem cells until they

                                                                                                                                                                                                                                                                                                                                                                                             phosphatase (PTP), designated brain derived phosphatase I (BDP-1, see AAW49908), that is expressed in most tissues and cell lines at basal level, but expressed high in epithelium origin cell lines and cancer cell lines. BDP-1 was originally identified in a human brain cDNA library, although the full-length clone was isolated from the haematopoletic MEG01 cDNA library. The invention relates to novel proteins (see AAW49906-14) involved in cellular signal transduction and to the nucleic ceids (see AAV17097-99) coding for them, and provides vectors, host cells, purified recombinant proteins, methods for identifying compounds that activate or
                                                                                                                                                                                                                                                                                                                           New phosphatase and kinase enzyme(s) - useful in the diagnosis and treatment of signal transduction disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       inhibit the novel proteins, as well as methods for the diagnosis and treatment of diseases associated with the novel proteins.

No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer

cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTS are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTS are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic; chemokinetic; thrombolytic; drug screening; arthritis; inflammation;

                                      The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, fimunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral scienosis, and Shy Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression,
                                                                                                                                                                                                                                                            Activin/Inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.
                                                                                                                                                                                                                                                                                                                                                  The sequence data for this patent did not form part of the printed

proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNA of the invention.

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM42213) with nootropic, the encoded polypeptides (AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynuclectides are useful in gene therapy. A composition containing a polypeptide or polynuclectide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, and thrombolytic activity, arthritis and inflammation, leukaemias and C.N.S disorders.

The present sequence encodes partial human non-receptor protein tyrosine phosphatase of hematopoietic stem cells (PTP HSC). This protein is prodominantly expressed in early hematopoietic stem cells (HSCs) or progenitor cells, and lacks expression in adult tissues. The protein has a N-terminal tyrosine phosphatase domain, followed by a region rich in serine, threonine and proline and a C-terminal region of about 15-25 amino acids which is rich in basic amino acid residues. The protein is capable of tyrosine dephosphorylation in hematopoietic progenitor cells, and functional derivatives of such native tyrosine phosphatases. The progenitor cells phosphatase domain of the PTP HSC or a PTP HSC-expressing HSC or progenitor cell can be used in an assay for the identification of PTP HSC antagonists or agonists. The antagonist can be used to induce the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Non-receptor protein tyrosine phosphatase; hematopoietic stem cell; PTP HSC; progenitor cell; tyrosine phosphatase domain; PTP HSC agonist; tyrosine dephosphorylation; tyrosine phosphatase; PTP HSC antagonist; stem cell differentiation; ss.

differentiation of stem cells, such as undifferentiated malignant hematopoietic cells, e.g. leukaemia cells, which may facilitate their treatment. The PTP HSC or an agonist antibody against the PTP HSC can bused for the expansion of undifferentiated stem cells in cell culture (this allows expansion of HSC prior to autologous or heterologous bone marrow transplantation), while the agonist antibody along with a hematopoietic growth factor can be used for the expansion of undifferentiated stem cells in vivo.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 4, Sequence 4, Sequence 3, Sequence 1, Sequence 1, Sequence 1, Sequence 1, Sequence 1,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Description
